1. The first step in the process of the investigation is the identification of the problem. This is done by the investigator, who is usually a member of the research team. The investigator will identify the problem by looking at the data and the literature. The next step is to formulate a hypothesis. This is a statement that the investigator believes to be true. The hypothesis is then tested by the investigator. The results of the test are then used to either accept or reject the hypothesis. If the hypothesis is accepted, the investigator will then look for other factors that may be related to the problem. If the hypothesis is rejected, the investigator will then look for other hypotheses to test. The process of the investigation is a continuous one, and the investigator will continue to look for new factors and hypotheses as the investigation progresses.
