1. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Arar and Collins (1971) using a Shimadzu 1601 UV-Visible Spectrophotometer. The concentration of chlorophyll was expressed in $\mu\text{g mL}^{-1}$.

1. The first step in the process of the investigation is the identification of the problem. This is done by the investigator who is responsible for the investigation. The investigator must identify the problem and the scope of the investigation. The next step is to collect data. This is done by the investigator who is responsible for the investigation. The investigator must collect data and analyze it. The next step is to draw conclusions. This is done by the investigator who is responsible for the investigation. The investigator must draw conclusions and report them. The final step is to implement the findings. This is done by the investigator who is responsible for the investigation. The investigator must implement the findings and report them.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses in all cases. The number of correct responses was significantly higher than the number of incorrect responses in all cases.
