1. The first step in the process of the investigation is the identification of the problem. This is done by the investigator who is responsible for the study. The investigator must first identify the problem and then determine the scope of the study. The next step is to design the study. This involves determining the research objectives, the research questions, and the research hypotheses. The investigator must also determine the appropriate research methods and the data collection techniques. The third step is to collect the data. This involves the actual collection of the data from the subjects of the study. The fourth step is to analyze the data. This involves the use of statistical methods to analyze the data and to draw conclusions from the results. The final step is to report the results. This involves the preparation of a report that summarizes the findings of the study and the conclusions drawn from the results.
